New Course in Spring 2008!

This course is designed as a conversation about the interaction between the organizational, technical, operational and regulatory elements of privacy and security.

As information technologies increasingly expand the ability for organizations to store, process, and exploit personal data, privacy is at the center of discussion and controversy among multiple stakeholders including business leaders, privacy activists, and government regulators.

This course responds to the call for the balance between ubiquitous information access and privacy protection. It presents a multidisciplinary examination of privacy in the information age. It mixes technical details, applied value and organizational insights of assuring privacy and security through the use of case studies, real-life problems, hands-on exercises and team projects.

Schedule Number: 937324
Prerequisite: SRA 211 or SRA 221 or equivalent (approval by instructor)
